

# PC / Software Potentiser / Radionics Remedy Maker (RRM)

By Resonance Devices

[www.resonancedevices.com](http://www.resonancedevices.com)

In order to transfer the files you should first create a folder on your hard disk, and then copy the files into the folder you just created. You can also place a shortcut to Radionic2.exe on your Desktop.

## *Introduction*

The Radionic Potentiser software enables vibrational remedy information to be entered either by typing in the name of a remedy you want, or by typing in a Radionic Rate.

Copy function of the RRM / Software is specially useful for directly copying human bio-field signature and potentiising the substance at output. Therefore, working out the needed remedies for a human being isn't needed (that's a concept, difficult to absorb ! ... ).

Yes, those who used it can ascertain; rest assured.

The program itself cannot perform any remedy making functions without the associated Potentiser hardware.

The program requires the use of a desktop computer or laptop running Microsoft Windows (95/98/2000/ME/XP/ Windows 7- 10 or later) and fitted with a soundcard and speakers.

The program is also used in conjunction with a wav file - tone2.wav which accompanies the software. Please make sure you install both radionic2.exe and tone2.wav in the same folder on your computer.

-----

The software enables vibrational remedy information to be entered either by typing in the name of the remedy you want, or by typing in a Radionic Rate. Due to way the program operates there is no limit as to what remedy might be. The program together with the appropriate hardware together with certain underlying principles of subtle energy serve to synthesize remedy vibrations, remedies are not accessed from an internal database.

Names or Rates of remedies required are entered into any one of the four drop down fields where it is labeled "Set Remedy or Type COPY" More than one Remedy can be entered on each line provided that Remedies are separated by either a space or a comma.

Names or Rates relating to information entered and then Potentised are recorded in the drop down boxes, and may be re-called by clicking on them. Information entered can be cleared temporarily by clicking on the reset button, or can be cleared permanently from the drop down lists by clicking on the "Clear Lists" button.

In addition on quitting the program a notepad file is automatically created in the same directory as the program called "Remedy" and this records anything that was left in the drop down lists at the time of leaving the program.

The Potentiser uses scroll buttons (up and down) to select potency, the potency boxes allow the making of Homoeopathic Remedies from 1 - 9999 X, C, D, M, CM, MM, and LM. To save time potencies may also be typed in, or if no Potency is required both Potency boxes may be cleared.

An additional useful feature is a power control - calibrated in Units. The default setting is 30 Units, this is the power level of standard Homeopathic Remedies bought at a pharmacy, or made on any Radionic Potentiser. Using remedies with a higher power level than 30 Units is

like taking more than one dose at a time, and considerably shortens the time required for effective treatment.

Remedies may be made with power levels of 1 - 1600 Units, although we do not recommend the use of higher than 250 Units for therapeutic applications, most remedies being taken at 30 - 200 units. The higher levels of 250 - 1600 Units are for use in experimental or industrial applications.

The Potentiser includes timer controlled Energisation, the timer may be set by the use of the drop down box to provide a time period of 3 - 30 seconds, although adequate potentisation may be achieved with the default 3 seconds.

In addition three other separate energy programs are available in the form of a "Lock" function, which prevents your remedies from losing potency if stored next to strong smelling substances, or dropped on the floor, and a function that allows you to program your remedy to give it special qualities that you have defined. The Programme function can be used as a stand alone Potentiser for making remedy combinations and or combinations of Potency. In addition a screen is included for making any one of thousands of possible color remedies, click on Color Rem under the Remedy Tag to select this function, and click anywhere in the rectangular box to insert the color of your choice.

Programs are linked together through the use of on-screen buttons so one can first originate a Remedy vibration, then Program that vibration, then Lock that vibration into the carrier material. Alternatively one can miss out the programming sequence and go direct from Origination to Locking.

All the buttons on the screen are operated by clicking on them with the mouse, and in addition the Potentise button is also operated by hitting the Enter key.

-----

The Potentiser for P.C has recently been updated with an Energy Memory. This can be switched into the circuit, enabling remedies that you have created on the Computer to be stored within the hardware, and then be broadcast continually to a patient after the Computer has been switched off.

The Energy Memory also has a bypass switch which enables other remedies to be made on the system without affecting vibrations stored in the Energy Memory, and an Erase function is provided to clear the Energy Memory when you have finished with whatever was stored in it.

The switch that selects between "Memory" and "Direct" is also the same switch that is used to enable remote broadcasting, in this case being set in the memory position.

The equipment comes with a "Transmitting Pickup". This is placed on top of the Computer Monitor, or preferably attached to the edge of the screen using the Velcro (not on the screen itself). This Pickup will work equally well either with all types of monitors.

The overall process is to originate the required vibrations using the Computer program, Radionically transmit that vibration to the hardware where it is stored in the Energy Memory, for continuous transmission to a patient, or directly to the Receive well to make tablets or broadcast a single dose.

## Procedure for making a Remedy vibration and sending it the Potentiser for P.C:

1. Attach the Transmitting pickup to your Monitor or the side of your LCD Screen.
2. Open the Radionic Potentiser program by clicking on its Icon.
3. Where it is labelled " Enter Remedy or Type Copy" type in the name of a Remedy vibration you want, or its Rate. (e.g. Homeopathic Remedy, Flower Remedy, Gemstone Remedy etc) If you require more than one remedy the others can be typed into the second or third or fourth field and if required names can be separated on each line by the use of a space or a comma.
4. If a Homeopathic Potency is required either select from the up/down boxes or type in the figure you require. If no Potency is required delete both Potency Boxes.
5. If you require a higher or lower than normal power level either select from the up/down boxes or type in the figure required. Range is 1 - 1600 Units.
6. Set the switch on the side of the device to DIRECT, and place some blank tablets or a bottle of water or alcohol in the "Output" well of the device.
7. Click on the Potentise Button or hit "Enter". The word "Energising" appears on the screen accompanied by the progression of a status bar. At the end of the potentisation a double beep is heard.
8. If you require to program that vibration select Programme under the Remedy Tag on the top bar. In the space provided type in your Energy Program. When you are finished, click on Potentise to transfer that information.
9. If you require to Lock that vibration, click on the "Lock" button. The Lock program is preentered so all you need to do is click on Potentise.
10. Your Remedy is now ready for use.

To leave the program hit the "Quit" button.

-----

## Procedure for Copying a Remedy:

1. Place the remedy or other item you wish to copy the vibrations from in the Input Well.
2. In the Potentiser program type the word "**COPY**" on the first line (where it states **ENTER REMEDY OR TYPE COPY**).
3. If a Homeopathic Potency is required either select from the up/down boxes or type in the figure you require. If no Potency is required delete both Potency Boxes.
4. Proceed as in stage 5 above.

**Procedure for making a Remedy vibration and STORING in the Potentiser MEMORY:**

1. Follow directions 1 - 5 exactly as above.
2. Set the switch on the side of the device to MEMORY.
3. Follow directions 7 - 8 above.
4. Do NOT Lock the vibrations into the Memory as this may make them difficult to Erase.
5. Set the switch on the side to DIRECT. Your remedy vibrations are now stored.

-----  
**Procedure for Broadcasting a Remedy vibration that is stored in the Potentiser MEMORY:**

1. Place a hair sample from the patient in the Output well, or a photograph of them taken on their own.
2. Switch from the DIRECT position to the MEMORY position.
3. You are now broadcasting to the patient whatever was stored in the Memory.

-----  
**Procedure for Erasing the contents of the Energy Memory:**

1. Set the switch on the side of the case to MEMORY.
2. Operate the ERASE switch on the top of case, moving it towards the label, and holding it there for at least 3 seconds, then release it and allow it to spring back to the OFF position.
3. The MEMORY is now Erased (cleared).

-----  
The Potentiser is supplied with a Lead and clip so you can connect to a metal plate, so that you can potentise quantities of tablets or other material that is too large. To do this plug the output lead into the socket on the side of the case that is labeled "OUTPUT"

Vibrations and remedies can be outputted to the lead and clip either in DIRECT mode or in MEMORY mode.

Do not leave the Transmitting Pickup attached to Monitor when you are browsing the Internet, doing emailing, etc to avoid polluting the input circuit.

**Note.** Do not place any magnets anywhere near the equipment as this will damage it and stop it working. To preserve the long life of the equipment store it inside a steel box (filing cabinet or tool box) to protect it from electromagnetic radiation.

If the wells/ plates become dirty they can be cleaned with Isopropyl alcohol and a tissue.
